

## LEVER TONGS KP 1

### Use and description:

Lever tongs **KP 1**, hereinafter only tongs enables to cut the chain links, reinforcing steel bars, steel ropes, and cables.

The tongs consists of cutting blades manufactured from the chrome steel 61CrV4. The blades, despite their high hardness show the strength exceeding the standards ISO/DIN. Blades used for the cutting of the chain links and reinforcing steel bars have the edge grooved with the milling operation (patented technology). This enables to accelerate the cutting operation on up to 30%. Thanks to the asymmetric grinded cutting blades is the cutting of the chains, cables and steel ropes very precise and easy. In addition the wear resistance is higher. It is also possible to cut small diameter ropes and wires in the space between levers.

LEVER TONGS KP 1

### Characteristics:

Type		KP 1
Max. $\varnothing$ of the material to be cut		
Steel reinforcing bars 4,8 DIN 975	mm	16
Steel rope	mm	12.7
Cable	mm	17.5
Length	mm	900
Weight	kg	4.5
